Description

The Treemap layout allows to display data according 2 axis. It gather objects (depending a value of their attribute) and organize them on a chart. The size of the objects depends on the value of another attribute.

Installation

https://github.com/casewise/cpm/wiki

How to set up the treemap layout

First you need to create the following page structure. Configuration
Please note you can display the treemap without using tabs in your page.

Then you need to fullfill the options **Group by property** and **Size/Volume** with the property scriptnames (lowercase). There is no constraint with the **Group by property**. However the **Size/Volume** property need to be an integer property.

Once the configuration is set up, deploy your website (don't forget to deploy themes too !)

Result

Below is a screenshot of what you get once your treemap is correctly configured Configuration

You can click on a group of object to zoom-in. To zoom-out, click on the black ribbon above the chart.
